San Pascual HR Records

A records system prototype for the Municipal HRMO

October 2026

What HRMO told us

1. **Records split across files**
   JO, permanent, service and leave records in separate sheets

2. **Duplicate profiles**
   The same person entered more than once, with conflicting details

3. **Misplaced paper**
   Physical documents are hard to locate when needed

4. **Slow, error-prone reports**
   Reports and leave balances take long and need rechecking

~420
municipal personnel

2 in 3
are Job Order or Contract of Service workers

One record, many protections

One person, one record

Every appointment, renewal and end is added, never overwritten

Paper stays the master

The system records where each signed original is filed

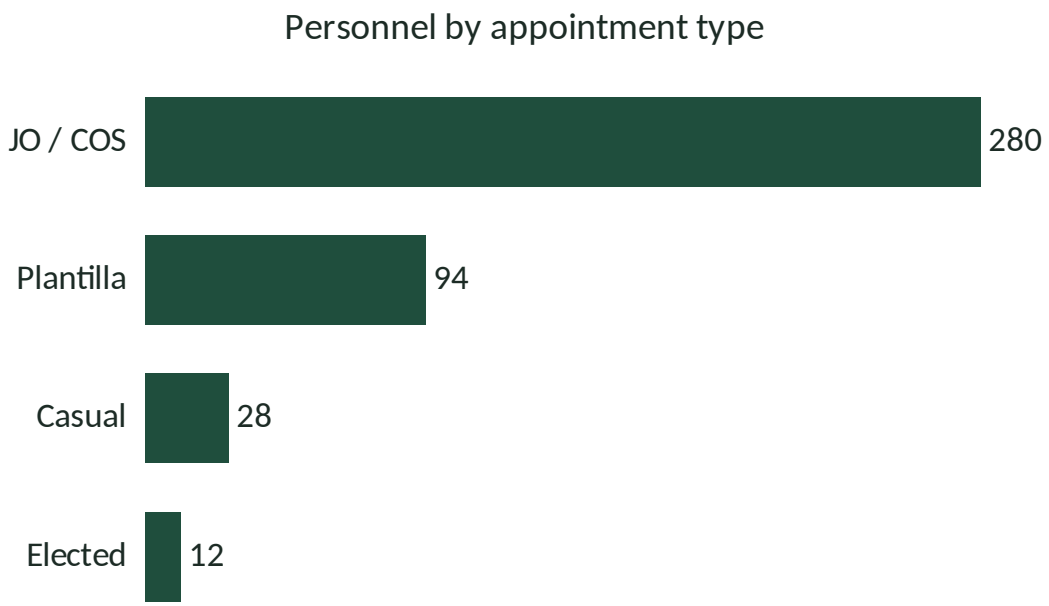

Every action is logged

A trail no one can alter, not even IT

Each role sees its part

Office heads see their office; pay and IDs stay with HRMO

The workforce in the prototype

25 offices

444 appointments

6 projects

Mix from the October survey. Every record is generated; none is real.

Today's walkthrough

1. **Opening** — 2 min
2. **HRMO daily work** — 6 min
3. **HR calendar** — 2 min
4. **Two people editing** — 2 min
5. **Who sees what** — 4 min
6. **Projects** — 3 min
7. **Audit trail** — 3 min
8. **IT admin limits** — 1 min
9. **Bulk accounts** — 1 min
10. **Close** — 2 min

Who sees what

	HRMO	Auditor	Office Head	Office Staff	Executive	Employee
Name, position, office	✓	✓	✓	✓	✓	*Own*
Mobile and email	✓	✓	✓	✓	—	*Own*
Birthdate and address	✓	✓	—	—	—	*Own*
Government IDs	✓	✓	—	—	—	*Own*
Pay and salary grade	✓	✓	—	—	—	—
Document files	✓	✓	*Status*	—	—	*Own*
Audit trail	—	✓	—	—	—	—

Office roles see only their own office. Only the emergency superuser can give someone an HR role; IT sees no HR records.

Built to resist misuse

- **The server checks every request**
  Editing the page or address with Inspect Element gets nothing
- **History cannot be rewritten**
  Audit rows can't be changed; the DPO holds a check code
- **No silent overwrites**
  If two staff edit one record, the second save is stopped
- **Safer passwords**
  One-time passwords, a forced change, and lockout after 5 wrong tries

176

automated tests

including forged requests that try the Inspect Element trick on every role

Projects: define, fund, then hire

Planning or Budget
Project Maintainer role

Records the project
dates and funding reference

HRMO hires
only onto funded, open projects

Contract fits
inside the project's dates

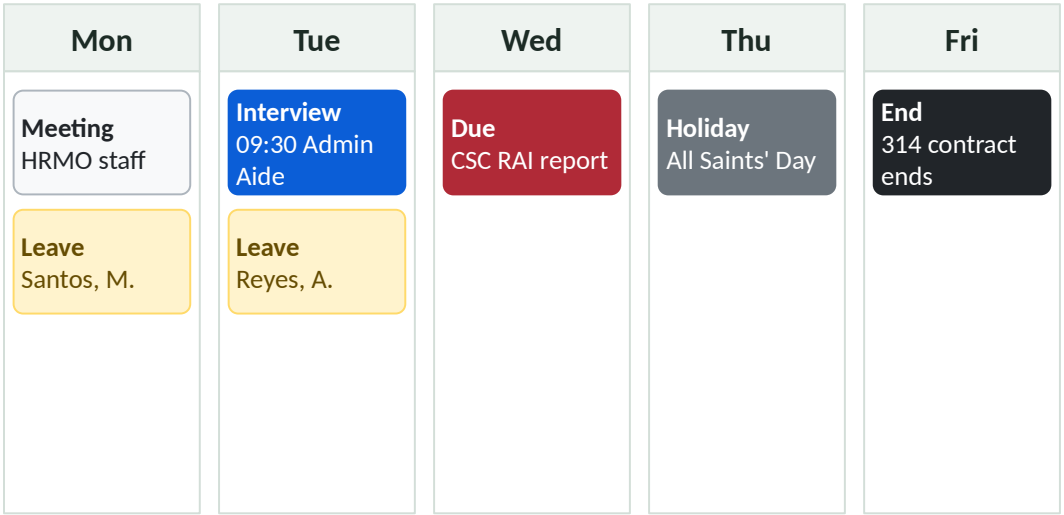

Separation of duties

The office that funds a project need not be the office that hires into it. Project Maintainers see headcounts, never names.

Still to decide

Who maintains projects: HRMO, Planning or Budget? Should JO / COS paid from a project be linked to it?

The HR calendar at a glance

An example week from the demo data

- Each role sees only its part
- Busy days collapse: 314 contract ends become one line
- Click a day for the full list
- Phones get a simple list instead of the grid

What comes next

Built so far: records, appointments, documents, roles, audit trail, projects and the HR calendar

7

Reports

Needs: which reports HRMO wants first

8

Leave filing and approval

Needs: the confirmed approval order

9

Excel import

Needs: sample sheets with personal data blanked

10

Phone self-service

Needs: HTTPS and a password-reset screen

Before real data goes in

Privacy

- DPO approval (RA 10173)
- Privacy Impact Assessment
- NPC registration check

Security

- HTTPS
- Second login step for HRMO, Auditor and admins
- Penetration test

Operations

- Nightly encrypted backups
- Server with UPS in a locked room
- Office network first

People

- A named maintainer
- HRMO and heads first, employees later
- A password-reset routine

Until all of this is done, the system runs on fake data only.

Other offices and new requests

Wants HRMO's data

e.g. Budget asks for payroll inputs

The HRMO Head decides and the DPO reviews. Met with reports or narrow roles, never broad access to personnel records.

Wants its own system

e.g. Treasurer wants a system like this

A new project: its own approval, privacy review, budget and maintainer.

Every request is written down and decided by the HRMO Head.

Decisions we need from you

1. Who owns and maintains the system after the prototype
2. Office network only, or internet access
3. The confirmed leave approval order
4. Sample Excel sheets, personal data blanked
5. Who maintains projects: HRMO, Planning or Budget
6. Which reports to build first
